PRODUCT DETAILS

CL400 Color-Changing Bentonite Cat Litter
Urinary health is the top health threat for cats. To address this, Petaboo's pH Color-Changing Bentonite Cat Litter is a urine health monitor. It instantly changes color upon contact with urine, allowing you to visually track urinary pH levels and enabling early detection of potential abnormalities. Once abnormal signs are observed, you can promptly take your cat to the vet. Furthermore, this bentonite cat litter is low dust and ultra lightweight, offering high efficiency liquid absorption and rapid clumping performance. Its formula is safe, non-toxic, and harmless, providing a dual health safeguard for both pets and their families.

Urinary Health Monitoring Cat Litter
Follow the pH color indicator to monitor your cat's health; it changes color to alert you to potential urinary diseases. Each bag of cat litter includes one pack of color-changing particles. How to use: evenly spread the color-changing particles on the surface of the cat litter for clear monitoring.

Natural Bentonite
Made with natural bentonite clay, mined from pure, deep layer reserves.

Perfectly Clumping
Highly absorbent for stronger clumps and less litter usage. Clumps tightly for easy, no-mess scooping.

99.5% Dust Free
Features dust free technology for prolonged dust control, promoting a healthier environment for both cats and their owners.

Eliminates Bad Odors
Petaboo's litter outperforms other litters in odor removal. It actively adsorbs ammonia, sulfides, and other odor molecules from waste, effectively reducing unpleasant smells.
