PRODUCT DETAILS

Medical-Grade Heart Monitoring
Withings ScanWatch NOVA is a medical device featuring a single-lead electrocardiograph (ECG) and reflectance photoplethysmograph (PPG). It measures, transfers, records, and displays lead I of an ECG, calculates heart rate, and detects the presence of atrial fibrillation (AF) or sinus rhythm.

Irregular Heart Rhythm Notification
Every 10 minutes, your watch looks for irregular patterns in your heart rhythm in the background. As soon as an irregular heart rhythm suggestive of atrial fibrillation is detected, you'll be notified on your device and on your phone. Your watch will then suggest taking an ECG recording.

30-Second ECG Recording
Take a medical-grade ECG anytime by resting your arms on a table and holding the top electrode (bezel) with your second hand. The recording lasts for 30 seconds and results can be shared with your doctor as a PDF via the Withings App.

Up to 30 Days Battery Life
Powered by a rechargeable lithium-ion battery, Withings ScanWatch NOVA offers up to 30 days of typical use on a single charge. Recharge using the included charging dock and USB-C cable.

Premium Design
Featuring a rotating bezel, OLED digital display, activity dial, and quick swap band, ScanWatch NOVA combines sophisticated watchmaking with advanced health technology. Available in a 42mm case weighing just 63g.

Withings App Integration
The Withings ScanWatch NOVA works with the Withings App (iOS 15+ or Android 9+), which allows installation, activation of medical features, and displays the results of all performed measurements.
