

Wilfa PowerFuel XL Digital Blender, 2L Black

251945

High-speed blender with real power to help you succeed in the kitchen. The Wilfa PowerFuel XL blends even the toughest ingredients to perfection in just seconds. Comes with a large and durable 2 litre jug.

PRODUCT DETAILS

Size meets power

The PowerFuel XL is designed and developed to efficiently blend large quantities of both hot and cold ingredients. To achieve this, Wilfa has combined a high-speed 2000W motor with 6 sharp blades and a 2 litre jug.

Wilfa's latest top of the range PowerFuel model with extra large jug blends the toughest ingredients to perfection in just seconds. It gives you perfect results with everything from ice cream, smoothies, almond flour, peanut butter to piping hot ready-made soup.

More than a blender

With its 6 specially designed blades and 32,000 revolutions per minute, this blender is the perfect kitchen helper. The digital display counts down the time both when running at manual speed and when using the pre-installed programs. Practical and easy to use.

BPA-free jug with "smart corners"

The jug holds 2 litres, is solid and made of BPA-free plastic. The pitcher has many advantages, the pitcher is both lightweight and extremely durable. It has "smart corners" that ensure maximum and efficient rotation of the ingredients. The contents are thrown up higher in the jug than in a traditional jug which in turn makes the mixing of smoothies, soups, flour, butter etc. more even. In addition, the jug can withstand contents up to 100°C. It also comes with a tamper for stirring the ingredients.

Programme settings

The PowerFuel has 3 preset programmes: soup, ice-cream and smoothie. The programs help you easily achieve perfect results for the most common tasks. Just press start and the blender stops automatically when it's ready to serve. You can also choose to run the blender in manual mode. Here you can set the speed and control the time so that you always achieve the desired result.

Automatic overload protection

To protect the blender from overloading, the blender has a built-in sensor. The sensor prevents the blender from starting if it detects that there are too many ingredients in the jug, as it then becomes too

heavy and can damage the motor.

Highlights

- 2000W
- 3 pre-installed programs; soup, ice cream and smoothies
- Adjustable speed
- 2 litre durable and lightweight jug in BPA-free plastic
- 6 specially designed blades for optimal ice crushing
- Tamper included
- 32 000 revolutions per minute
- 10 year motor warranty
- Model name: PB1B-T2000
