PRODUCT DETAILS

Capacity

Up to 1 litre, perfect for both large and small households.

Quickly reaches the right temperature

The coffee brewer quickly reaches the optimal water temperature, which is between 92 and 96 degrees. This ensures that the heat is stable and correct throughout the brewing process, giving you the best taste results from your coffee.

Perfect brewing time

The Classic coffee maker brews 1 litre of coffee in between 4 and 6 minutes - the perfect brewing time.

Automatic shut-off after 40 minutes

The brewer keeps the hotplate warm for 40 minutes and then switches off automatically.

Manual flow control - Perfect coffee, no matter how many cups

The flow control on the filter holder is both clever and effective, allowing you to decide how fast the water will flow through the filter and allowing you to tailor the coffee to your taste preferences. The result is perfectly brewed coffee with maximum flavour, whether you brew 1 or 8 cups.

5 year warranty

Do you love coffee as much as we do? With the Classic coffee maker, you'll have many coffee breaks for years to come.
