

Wilfa Innovac Sensor Vacuum Cleaner

255923

The handheld vacuum cleaner Innovac Sensor has been developed and designed to be an excellent helper in the home. The combination of powerful suction and the strong and quiet motor makes vacuuming with the Innovac Sensor comfortable, easy and efficient. With a battery duration of up to 60 minutes, it is possible to vacuum the entire house without stopping to charge.

PRODUCT DETAILS

Intelligent dust sensor

Innovac Sensor has several smart functions. The intelligent dust sensor detects the dust and will automatically adapt the strength according to need and amount of dust. The advantage of this function is that the vacuum cleaner uses the power necessary to get the job done, which also optimizes battery use and keeps the sound level to a comfortable minimum.

Speed + Settings

The handheld vacuum cleaner has four speed settings:

- Auto (default)
- High
- Medium
- Low

Silent technology

Everyone knows that vacuuming makes noise, but the Innovac Sensor is designed with quiet technology to give you a better experience when vacuuming. By sending the sound away from the person holding the vacuum cleaner and a softer tone on the sounds, the result is a lower and gentler sound. Sound measurements are in line with IEC 60704-1:2021: 57-67 dB min/max power.

Light and easy to handle

The light weight of the Innovac Sensor as well as precise and effortless handling make it easy to use for both young and old. The handheld vacuum cleaner has a good ergonomic grip, and unlike several other handheld vacuum cleaners, you don't have to hold the on button while vacuuming. That makes the Innovac Sensor easy to use - whether it's dragging across the floor or vacuuming between sofa cushions - your wrist will thank you for choosing an Innovac Sensor.

2-in-1 vacuum cleaner

With the Innovac Sensor, you get a 2 for 1 package with the option of choosing between a short or long version depending on what and where you are going to vacuum. This means that the handheld vacuum cleaner has a wide range of applications. With the accessories, the wireless vacuum cleaner is perfect for cleaning smaller surfaces such as the kitchen after dinner or for removing dust from nooks and crannies in the car, boat or caravan. And you don't have to lug around a heavy vacuum cleaner.

Informative LED display

Innovac Sensor LED display provides information on remaining battery capacity, which speed setting is in use and charging status during charging. In addition, the hand-held vacuum cleaner notifies when there is a need for, among other things, cleaning of the filter or if the brush is blocked.

Four-layer filter system

The handheld vacuum cleaner has a four-layer filter system that promotes clean exhaust air, in contrast to traditional vacuum cleaners which normally only have one or two filters.

The system consists of:

- Pre-filter
- Cyclone filter
- A washable filter
- HEPA filter

Easy to empty and clean

Innovac Sensor has a dust container and is bagless. It is easy to empty of dust when the 0.7 liter dust container is full. There are two ways to empty the container on the Innovac Sensor. One way is to empty the container while it is still on the vacuum cleaner by opening the hatch at the bottom of the dust container. The other way is to take the container off the vacuum cleaner and empty it.

The handheld vacuum cleaner has a washable filter and dust container.

Comes in the box

- Wall mount: Practical mount for storing the Innovac Sensor. Accessories can also be stored on the attachment and the charger can be connected.
- Replaceable floor brush: choose between a hard floor brush or a combo carpet brush.
