

Wilfa Performance compact coffee maker, black

252955

Meet the latest innovation in Wilfa coffee machines - Performance Compact. With its compact and space-saving design, it is perfect for any kitchen, regardless of size. Enjoy exceptional coffee every morning with our compact coffee maker that delivers big flavours in a small space.

PRODUCT DETAILS

High score in test at tek.no
In tek.no's latest test of coffee makers, the Performance Compact got the grade 8 - very good, which is a high score in the test. They describe the machine as brilliant for small kitchens. Read more about the test here.

Compact size
Performance Compact coffee maker is designed to fit on all kitchen counters with a small footprint of just 20x22 cm. This means that the coffee maker fits perfectly in a smaller student kitchen, in the cottage, for those who want more space on the kitchen counter, or for those who want a smaller coffee maker.

Unique pump technology
Fresh water is one of the most important ingredients in good coffee. Thanks to Wilfa's unique water pump technology, the Performance Compact is completely emptied of water with each brew and you pour the next jug only with fresh water.

This is in contrast to other funnels where water remains in the system when the funnel is finished, which will in turn affect the coffee taste on the next brew.

Removable water tank
The practical removable water tank of 1 liter makes refilling water easy and spill-free, while the water you pour with will always be clean.

The coffee flask can be tempting to use to fill water with, but it takes with it coffee residues that can flavor the new coffee you will make. Over time, using the coffee flask for water filling will cause the coffee maker to become flavored with old coffee. This is because grease from the coffee remains in the flask and these microscopic coffee residues are transferred when you use the flask to fill water.
Perfect brewing temperature
Performance Compact has an advanced brewing system that supplies water with optimal extraction temperature throughout the brewing process. It has a brewing temperature of 92-96° from the first to

the last drop, which results in an unforgettable taste experience.

Correct ratio between coffee and water
Use the measuring guide on the water container to get the optimal ratio between coffee and water for each brew.

Automatic drip stops
The Performance Compact coffee maker has an automatic drip stop that prevents spills. Automatic drip stop means that there is a mechanism that prevents coffee from dripping when you remove the flask with freshly brewed coffee.

Hot plate with auto stop
The tractor has a heating plate that keeps the coffee warm after brewing. It switches off automatically after 40 minutes for safety.

Hint! We recommend making coffee several times rather than storing it for a long time in order to drink coffee with the best possible taste.

Unique Scatter Head
All the good flavors from the coffee will be fully utilized with the unique spreading head that spreads the water evenly over the coffee during brewing.

Clean indicator
The start button also acts as an indicator for when the tractor should be cleaned. Then the start button shows a pulsating light and you should clean the tractor.

Approved by Norwegian coffee information
Performance is approved by Norwegian Coffee Information/ European Coffee Brewing Center (ECBC), which sets requirements for, among other things, water temperature and contact time with the water . In order to get maximum flavors and aromas from the coffee, it is absolutely necessary that the coffee maker works with the right water temperature from the very beginning and throughout the brewing time. At the same time, it is important that the water does not take too short or too long to flow through the coffee powder. Small deviations mean that you can end up with either sour or bitter coffee.

Designed and developed in Norway
We know the wishes and needs of Norwegian and Nordic homes, and work continuously to deliver products that satisfy these.

Specifications

- Item number: 602277
- Color: black
- Material: plastic
- Dimension: 20x22x32cm
- Auto drip stop: Yes
- Auto off function: Yes
- Brew temperature: 92° - 94°
- Brewing time, min: 4-6 min
- Capacity: 1L
- Capacity cups: 8
- Removable water tank: Yes
- ECBC approved: Yes
- Power (watts): 1600
- Heating element: 2
- Jug material: Glass
- Keep warm function: Yes
- Mixing cap: Yes

© 2026 All rights reserved. Note: Specifications and design are subject to change without notice.

- A cup of brewing: Yes
- Preparation method: Filter
- Washable: Yes
- Other information: Cord 1m
- Accessories: Coffee spoon
