PRODUCT DETAILS

PureVis technology

PureVis technology uses 270-275 nanometer spectrum to neutralize up to 99% of bacteria such as E.coli by breaking down their DNA before they have a chance to spread, improving the quality of your water. At the minimum, the LARQ Bottle PureVis should be filled with water that is clear to the eyes and does not contain any physical sediment as PureVis technology will not remove these impurities from the water.

The UV-C LED chip in the LARQ Bottle PureVis are smaller, more energy efficient, non-toxic (mercury-free), and more economical compared to traditional Mercury-based UV technology.

*Only use LARQ cap with LARQ Bottles
