PRODUCT DETAILS

Each refinement of Stanmore IV has been made for a better listening and intuitive experience. Its upgraded tweeters and redesigned bass port create a cleaner stereo sound that spreads further across your space. A customisable M-button has been added to adjust sound or access your music instantly. Built-in Auracast™ technology enables your speaker to be part of a multi-speaker listening set-up. Its classic, timeless Marshall look is inspired by our heritage amp design.

WIDE SOUNDSTAGE
Upgraded tweeters and waveguides in Stanmore IV spread sound wider, delivering a consistent and optimal sound quality across a larger space. With an expanded soundstage and an even dispersion of sound, each instrument feels more distinctive. You're placed at the centre of a clearer and more spacious listening experience. Being surrounded by detail, it deepens your connection to the songs you love.

ENHANCED BASS
Your music deserves powerful bass. This is the reason behind the refined shape and dimensions of Stanmore IV’s bass port. These design developments, made by our in-house acoustic experts, have created a cleaner bass that is fuller and more detailed. With cables at the bottom of the speaker, it's easy to place it nearer or even flush against a wall without affecting the performance or quality of the audio.

DYNAMIC LOUDNESS
The quality of your listening session shouldn't change, even when your listening needs do. This feature ensures every detail of your favourite music is balanced and defined, whatever volume you’re listening at. At lower volumes, full-bodied sound retains its clarity, richness, and warmth. When you want to raise the volume, improved limiters help deliver a cleaner sound. However you want to listen, you know your music will always perform at its best.

MULTI-SPEAKER CONNECTIVITY
Connect multiple speakers to hear perfectly synced sound across your space. Built-in Auracast™ technology enables Stanmore IV to be a part of this room-to-room listening experience. Simply join a broadcast from our streaming hub, Heddon or other Auracast™ compatible devices. When connecting via Heddon, a one-time set-up using the Marshall app is all it takes. Then you just press and hold the M-

button to join.

CUSTOMISABLE M-BUTTON
Get immediate access to the sound and music that fit the moment. The simple, purposeful, and instantly recognisable M-button is a new addition to Stanmore IV. Explore your EQ settings in the Marshall app and then assign your preference as a preset. Use this button to jump straight in. Or you can choose to activate Spotify Tap with a single short press to get directly to your trusted playlist.

TACTILE CONTROLS
The classic brass panel on top of Stanmore IV is home to our reliable amp-inspired controls. Continuing the connection with our heritage amp design, this speaker has the timeless look and analogue feel that is unmistakably Marshall. The panel includes an improved media jog and signature power switch. Designed for simple, responsive control, adjusting your volume, bass, treble, or managing your music playback is easier and more straightforward.

RCA & AUX INPUTS
Through the AUX and RCA inputs, you get more possibilities to connect other audio devices. To bring them into your listening set-up, simply connect a 3.5 mm stereo jack lead to the AUX input located on top of the speaker. For vinyl enthusiasts, we want to keep the authentic sounds spinning. The RCA input lets you connect your record player and fill your space with warm and rich sounds.

MARSHALL APP
Use our dedicated app to customise your sound and minimise constant tweaking. Start by adjusting your EQ settings to suit what you're listening to. Then tell the app whether your speaker is near a wall or edge, so placement compensation can optimise the sound based on where it is in the room. Assign your favourite preset to the M-button for quick access, set the control panel brightness to your liking, and choose when your speaker enters standby mode.

What's in the Box

- Stanmore IV speaker
- Quick start guide
- Legal and safety information
- Power supply cable
