T20 cordless vacuum cleaner

251675

The T20 is Dreame's penultimate top of the line model that challenges to cordless vacuum cleaner market. With Aerospace Standards a bare minimum, the T20 brings 125,000 rpm motor speed as a defining characteristic. This insane motor efficiency delivers 25,000 Pa of vacuum suction, as well as 150 AW in suction power, meaning no dirt and debris gets missed.

PRODUCT DETAILS

Unlimited performance.

Dreame T20 is equipped with a powerful motor that reaches up to 125,000 rpm and achieves a very high performance compared to other models.

The T20 model also offers a suction power of 150 AW and 25,000 Pa, which significantly increases the efficiency and performance of the vacuum cleaner.

Replaceable high-performance battery.

The vacuum cleaner model T20 is equipped with a removable battery that can be replaced if required. The high-performance battery allows suction in three different modes with different suction power to meet all the cleaning requirements of the home.

In standard mode, you can vacuum for 70 minutes with a single charge. The charging time of the battery is 4 hours.

LCD colour screen with button lock.

Dreame T20 has a digital display on which the power button can be locked. This makes cleaning much more convenient and easier.

The LCD colour screen displays information about the device in real time and it can be adjusted manually in addition to the suction modes. On the screen you can check the battery level and switch to a different suction mode. Furthermore, error messages and instructions for filter cleaning are displayed here.

Smart floor nozzle and universal brush roller.

Another novelty that Dreame has developed for the new model is the smart floor nozzle, which automatically increases suction power when carpet is detected to ensure a more thorough cleaning.

The design of the brush roller has also been optimised - thanks to the V-design of the brush, the vacuum cleaner roller is suitable for both hard floors and carpets, and prevents hair from getting

tangled in the brush.

Washable HEPA filter.

Both the dust container and filters from Dreame T20 can be taken off and washed, which extends the life of the device. For a perfect vacuum cleaner experience, it is recommended to clean this accessory regularly and avoid possible errors caused by the accumulation of dust or dirt.

The HEPA filter of the T20 vacuum cleaner is located directly behind the motor to create an even airflow without obstacles.

5-way filter system with HEPA filter and 12-cycle technology

Dreame T20 has an advanced 5-way filter system including HEPA filter. The H12 class HEPA filter filters small particles with a diameter less than 0.3 μm, while the other filters efficiently eliminate fine dust, separate large particles and effectively block pollutants.

In addition, the 12 cyclone system separates and reduces dust particles and reduces filter load by 63%. This means that compared to previous models, the life of the filters is doubled.

What's in the box

- Main Body
- Battery
- 2-in-1 Brush
- Extension Hose
- Extension Rod
- All-surface Brush
- 2-in-1 Charging & Storage Mount
- Mite Removal Brush
- Crevice Nozzle
