251944

Wilfa's PowerFuel Digital is a powerful and versatile digital power blender in a stylish design. It gives you perfect results with everything from smoothies, almond meal and nut butter to piping hot soup, blending even the toughest ingredients to perfection in seconds.

### PRODUCT DETAILS

Wilfa's PowerFuel Digital is a powerful and versatile digital power blender in a stylish design. It gives you perfect results with everything from smoothies, almond meal and nut butter to piping hot soup, blending even the toughest ingredients to perfection in seconds.

With its powerful ProGrade motor, 7 blades and up to 30,000 rpm, you'll get the best effect. The motor can run continuously for 10 minutes

Trick pot with "Smart corners"

1.5 litre tritan bottle, tritan weighs little and is very robust, far more than a standard glass bottle used for a regular blender.

The tritan jug has smart corners that ensure maximum and efficient swirling function. The contents are thrown up into the flask, which in turn makes smoothies and soups, flour, butter etc smoother. With a regular blender, the contents usually end up closest to the blades, but higher up in the flask and it becomes cloudier and coarser. The results will therefore vary as the circulation of the contents in a regular flask is usually poorer.

Modern Touch-LED panel

The blender is controlled by a Touch-LED panel

Program settings

The PowerFuel has 6 preset programs, so you can easily achieve smooth and perfect results when preparing soups, sauces, vegetables, nut butters and smoothies.

Time and speed settings

The blender has the ability to run both programmed and manual programs. Here you can set the time and speed so that you always achieve the desired result.

Automatic overload protection

To protect the blender from overloading, the blender has a built-in sensor that prevents the blender from starting if it detects that you have too many ingredients in it and it becomes too heavy.

Safety switch

The blender has a safety switch to ensure your safety, preventing the machine from starting without the jug being seated correctly.

Highlights

- 1680 W
- 1.5 litre Tritan jug with "Smart Corners"
- 7 blades
- BPA-free
- Modern LED panel
- 6 program settings (soup, sauce, vegetables, chopping, nuts and smoothies)
- Time and speed settings
- Automatic overload protection
- Safety switch
- Model name: BPDF-1680MB
