D10 Plus vacuum cleaning and mopping robot

251573

DreameBot D10 Plus makes virtually hands-free automated cleaning easily attainable. A remarkably convenient auto-empty function minimizes manual interaction to dumping a bag and putting in a new one—and with a 2.5L bag, that can be done as seldom as 8 times a year. Powerful suction and anti-tangle brush design makes it a fantastic choice for cleaning up after pets. Other advanced features like LiDAR navigation, water control, suction adjustment, and more, combine to clean your whole home impressively well while you do the things that matter. Clean more while cleaning less with DreameBot D10 Plus.

DÉTAILS DU PRODUIT

45 days* of hands-off cleaning.

Fully automate your day-to-day cleaning to live more comfortably. No need to empty the dust box after every cleanup. Automatically empties dirt into a 2.5L sealed bag to provide up to 45 days* of totally hands-free cleaning—without fine dust floating up into the air.

*45 days: Based on the environment test of Dreame's lab and calculations of cleaning 120m² per cleaning session, during which it should collect about 100mL of dust. Under these conditions and performing one cleaning session 4 times each week, it takes 45 days for the dust bag to be full. Actual performance may vary depending on real world environment and usage.

Maximum collection, minimum disruption.

Quietly and thoroughly empties the robot's dustbin in just seconds to minimize disruption and maximize cleaning time. DualBoost technology provides efficient dust collection by blowing and suction via two air circulation paths to take in the dirt, remove and lock in odors, and prevent clogging.

High-performance LiDAR navigation.

Accurately maps your home in as little as 8 minutes* and avoids obstacles for effective, efficient cleaning, especially in rooms with more closely spaced furniture. Scans an 8-meter radius and uses LiDAR navigation and a SLAM algorithm for dynamic mapping and intelligent route planning.

*8 minutes: Based on Dreame environmental mapping lab testing, it takes 8 minutes to construct a 100m² floor plan in fast mapping mode. Actual performance may vary depending on real world environment and usage.

Customize your clean.

Take control via the app to decide where and when your robot cleans and what spots it should avoid. Customize operation in the app to select cleaning modes, clean certain rooms, set a virtual wall, place a no-go zone, and more.

Hair-raising vacuuming.

Powerful, automatically adjusted suction digs deep into carpets and thoroughly cleans hard flooring to pick up dirt, debris, hair, fur, and more—fantastic for homes with pets. Intelligent carpet detection that adjusts suction pressure accordingly up to a max 4,000Pa and a main brush roller design combine for deep, effective cleaning.

Manage your water.

Set your water usage to wash your floors exactly the way you want. Choose from three water volume options to control water usage and mop dampness according to how dirty the floor is for robust, efficient cleaning.

Cleans longer.

Covers more space on a single charge for maximum coverage and convenience. The 5,200mAh large-capacity battery provides ample power for continuous, large-scale cleaning up to 270m²*

*270m²: Tested by Dreame lab, actual performance will vary based on different home environments.

Cleans at your command.

Voice control allows you to just say the word to start, pause, or stop your robot and make automatic cleaning even more hands-off. Supports Alexa and Google Home to put automatic cleaning at the tip of your tongue.

What's in the box

- Robot
- Auto-Empty Base
- Cleaning Tool
- Power Cord
- Dust Box
- Water Tank
- Mop Pad
- Side Brush
- Dust Collection Bag x2
- Main Brush
