DÉTAILS DU PRODUIT

When Devialet hit the stage of the hi-fi world more than 10 years ago with the ~~EXPERT 250 PRO~~, ~~EXPERT 210 PRO~~ and fascinating design of the French amplifier was a real revolution. And that is still true today for the successor models of the Devialet EXPERT series PRO - thanks to constant development, Devialet has managed to be always (at least) one step ahead of the competition.

Dimensions EXPERT 1000 PRO DUAL, EXPERT 440 PRO DUAL, EXPERT 140 PRO, EXPERT 220 PRO,

With the two-part Devialet EXPERT 210 PRO, Devialet takes a giant step toward the ultimate high end. The true dual-mono architecture separates the amplification of the two channels completely from each other and allows even lower distortion, even more power and, above all, even better sound. Here, the hybrid amplifier technology ADHV2® can show its advantages even more impressively.

Of course, the Devialet EXPERT 210 PRO also has the speaker management SAM®, so it can be optimally adapted to any speaker. In a constantly growing loudspeaker database Devialet's developers capture the characteristics of numerous loudspeakers from different manufacturers. The resulting speaker profiles and all other settings can be conveniently set up in an online configurator and transferred to the device on an SD card.

Devialet also uses its own converter technology called the DAC Magic Wire® in the Devialet EXPERT 210 PRO. This is so integrated into the infrastructure of the device that the distance between D / A converter and speaker connections is only a record-breaking 5 cm. Harmful influences on the sensitive analogue signal have no chance.

The Devialet EXPERT 210 PRO connectors are the same size and quality as the Devialet EXPERT 140 PRO. This also applies to the integrated high-quality phono preamplifier, which can be tuned extremely precisely to the pickup used. The Devialet EXPERT 210 PRO receives music data via LAN cable or wirelessly via Wi-Fi. A separate App from Devialet is available for controlling the streaming. The operation in everyday life is about the currently perhaps most beautiful remote control in the industry. In addition, the Devialet EXPERT 210 PRO can be connected to up to 8 other Devialet devices over the network.

Like all devices in the Devialet EXPERT series, the Devialet EXPERT 210 PRO is also based on Devialet's

Evo® platform and can be software-upgraded for future technical developments, new standards or formats.
