

UDB-1 USB DAB Adapter

BLACK

Little black box adds a world of content

Here's a simple way to add DAB/DAB+ tuning to your Onkyo A/V receiver or home entertainment product. Plug the UDB-1 adapter into your compatible component's rear USB, connect the supplied cable antenna, and you're ready to explore a huge selection of free-to-air programming. From classical to jazz to indie rock, news to talk to comedy, your favorite stations not only sound better, they also show song and program information, weather and traffic alerts, and more on-screen. Then there's a wealth of new digital channels to find and save to your component's preset memory. With digitally simulcast FM/AM programs and scores of specialist themed channels, you'll never be short of entertainment to enjoy.

A wider program selection

Most government and commercial stations provide digital simulcasts of existing AM and FM broadcasts, but because digital uses bandwidth more efficiently, they're also able to provide additional digital stations as well. Whether you enjoy jazz, classical, classic rock, easy listening, independent music, or prefer news and talk, you'll find stations with curated content you want.

Scan, save, and play

Use your component's existing radio scanner function and preset memory to find and save the stations you enjoy most, so you can access them easily whenever you want.

Sounds better, no interference

Because DAB+ is transmitted using an improved AAC codec, and with most broadcasters offering higher bitrates than first-generation DAB, you can expect sound quality equal to or better than traditional analog FM. Further, digital radio suffers less interference from adjacent channels, and the signal isn't affected by bad weather conditions.

Supplied accessories

As well as a long indoor radio antenna cable, the USB DAB Adapter also includes a female-to-male USB cable, which allows you to connect the adapter when the receiver is rack-mounted, installed close to a wall, or if there's little space inside A/V furniture.

FEATURES

- DAB and DAB+ radio tuners included
- Adds existing FM/AM broadcasts in digital format
- Access to many additional channels with specialized content
- Excellent audio quality with low-interference signals
- Use component's memory presets to save stations
- Direct USB input or USB cable extender connection where installation space is limited behind rear panel
- Includes Indoor DAB/DAB+ antenna cable
- Compact, lightweight, and high-quality construction

Compatible Models:

For a list of Onkyo products tested for compatibility with the UDB-1, please visit www.onkyo.com.

SPECIFICATIONS

Power supply	Component via USB
Current consumption	120 mA
Connector	USB 2.0 Type-A
Tuning frequency range	17.928 (5 A) MHz-239.200 (13F) MHz
Dimensions (W x H x D)	30 x 16 x 76.8 mm
Weight	22.0 g

CARTON

Dimensions (W x H x D)	165 x 111.6 x 25 mm
Weight	120.0 g

Supplied Accessories

- Instruction manual
- extender cable
- DAB/DAB+ cable antenna
- warranty card
