PRODUCT DETAILS

Precision cleaning with LiDAR technology

The Innobot RVC-B4LIN is equipped with 360° LiDAR technology, allowing it to create accurate maps of your home and plan the most efficient cleaning routes. It seamlessly navigates around obstacles, avoids stairs, and remembers where it's cleaned, ensuring no area is left untouched. This means faster, more precise cleaning without unnecessary battery drain.

Powerful cleaning performance

With a suction power of up to 4000 Pa*, the Innobot RVC-B4LIN effortlessly picks up dust, food crumbs, pet hair, and other debris – even from deep carpets and tricky corners. Its all-around brush, a blend of bristles and rubber, adapts to different surfaces with a floating function, ensuring a thorough clean every time.

*Pa is an international unit of pressure that indicates the suction power for vacuum cleaners. The calculation for this unit is Newton per square metre.

Cleaning capacity

The Innobot RVC-B4LIN is recommended for cleaning areas of up to 150 m². Please note that the washable surface area may be smaller than the total floor space due to covered areas. On a single charge, the robot can clean up to 110 m². If it doesn't complete the job, it will automatically return to its charging station, recharge to 60%, and resume cleaning from where it left off. This speeds up the cleaning process as the robot doesn't need a full charge to finish the task.

Wet mopping for a shiny finish

More than just a vacuum, the Innobot RVC-B4LIN also wet mops your floors! Its Y-mopping function moves back and forth in a pattern that ensures a deep clean across all surfaces. With the digital water tank, you can easily adjust the water level for mopping via the app, tailoring it to your needs.

Carpet detection

Innobot RVC-B4LIN automatically detects carpets through the friction and resistance of its main brush, increasing suction power when needed to ensure a thorough clean on all surfaces.

Customise the cleaning via the mobile app

Take full control of your Innobot through the intuitive mobile app. With a single tap, you can start or stop the vacuum, choose between vacuuming, wet mopping, or both, adjust suction power, set no-go zones, and much more. Monitor the robot's progress in real-time to ensure your home is being cleaned exactly how and when you want. Plus, multiple users in the household can manage the robot from their own devices. Download the app for Android and iPhone by clicking on the links here: [iOS](#) and [Android](#).

Multi-language support

The app is available in EN/NO/DK/FI/DE/SE, making it easy for everyone to understand and customise settings, regardless of language preferences.

Seamless connectivity

Connecting your Innobot to 5 GHz Wi-Fi is quick and easy, even with mesh routers. Once connected, you can control the robot from anywhere via your smartphone, ensuring your home is clean even when you're not there.

Hassle-free maintenance

To keep your Innobot performing at its best, simply clean the filter and wash the dustbin and brushes regularly. The dustbin is washable but ensure it's completely dry before reinserting it into the robot.

Consistent cleaning, day or night

LiDAR technology ensures precise cleaning, regardless of lighting conditions. Whether it's bright daylight or in the middle of the night, Innobot guarantees the same spotless results.

Accessories and spare parts

We offer a wide range of accessories and spare parts for the Innobot RVC-B4LIN. The app provides detailed information about the lifespan of each component, letting you know when it's time to replace them for optimal cleaning results.

Included in the box:

- Robot vacuum cleaner - Vacuuming and wet mopping functionality
- All-around brush with floating function - Brush for carpets and hard floor that adapts to the surface.
- Side brush - Removes dust from corners and around obstacles
- HEPA filter - For clean exhaust air
- Wet mop - Removes stains
- Charging station - Place for easy return and charging
- Floor protector - Protects the floor from moisture from the mop when storing and charging the robot
